# Jason Alexander Wijaya

+62 82322631688 |jason.wijaya013@binus.ac.id | Jason-Porto-Vercel.App | linkedin.com/in/jasonalexander8/ | github.com/jasonalexanderjsnaldr

## Education

**Bina Nusantara (BINUS) University** Jakarta, Indonesia
*Bachelor of Computer Science, DataBase Technology Specialization Track* *Aug. 2024 – Present*
*GPA: 3.60/4.00*

## Projects

**Disease Detector** | *Python, Flask, Scikit-learn* *Sept. 2026*
Live App | Github-Disease-Detector

- Built an end-to-end ML web app predicting diseases from user-reported symptoms across 41 disease classes, comparing 4 classification algorithms via F1-macro and 5-fold stratified cross-validation, and selecting Random Forest as the production model.
- Deployed a live production system on PythonAnywhere with confidence-based safeguards to flag unreliable predictions from ambiguous symptom combinations.

**ACON POS** | *HTML, CSS, JavaScript, Supabase, Vercel* *Aug. 2026*
Live App | Github-ACON-POS

- Designed and developed a full-featured Point of Sale system for retail stores, covering inventory management with tiered supplier discounts, checkout, debt tracking, returns, and financial reporting.
- Built a PostgreSQL (Supabase) backend with an atomic RPC transaction function and Row Level Security policies to prevent stock/data inconsistency during checkout.

**Big Data E-Commerce Analytics** | *Python, PySpark, Apache Spark, Hadoop HDFS, Power BI* *Jun. 2026*
Github-ProjectBDP

- Built a big data pipeline (Hadoop, PySpark) and ML models (CatBoost, Random Forest) achieving 81.98% accuracy predicting e-commerce customer satisfaction from 95,000+ transactions, visualized via Power BI.

## Research Paper

**Comparative Firewall Effectiveness Against Port Scanning Attacks on Linux Systems**
*Submitted to IEEE Conference(ICORIS 2026)* *Sept. 2026*

- Built a controlled experimental pipeline comparing UFW and Port Knocking against Nmap TCP SYN scans on Ubuntu 22.04 LTS, achieving full port concealment (0 open ports detected) with Port Knocking vs. 50% reduction with UFW ($p < 0.01$, Paired T-test).
- Ran a comprehensive comparative study across five replicates measuring CPU/RAM overhead and packet drop rate,showing UFW delivers security gains with minimal performance cost(+6.5% CPU,+2% RAM) while Port Knocking maximizes stealth at higher resource overhead (+20% CPU)

## Experience

**VESAK DAY – KMBD (Buddhist Student Association) BINUS** *May. 2026*
*Volunteer - Event Division* *Borobudur Temple, Magelang, Indonesia*

- Assembling, crafting, and installing lanterns to hang from the canopy in a high-traffic area frequented by visitors.
- Acting as a greeter and guide, providing directions, and escorting visitors to their destinations.

**HIMTI (Informatics Student Association) BINUS** *Mar. 2025 – Mar. 2026*
*Academic Event Committee Member* *Semarang, Indonesia*

- Coordinated 5 main events reaching 500+ attendees, collaborating with 150+ committee members across divisions

## Technical Skills

**Programming Languages**: Python,Java,C,HTML,CSS,JavaScript
**Databases**: MySql,PostgreSQL,HiveQL
**Data & BI Tools** : Tableau,Power BI,Pentaho,Microsoft Office
**Design Tools** : Figma,Canva
**Languages**: Indonesian(Native),English(Intermediate),Mandarin(Basic)
